1 Introduction

Hello, here is some text without a meaning. This text should show what a printed text will look like at this place. \( \sin^2(\alpha) + \cos^2(\beta) = 1 \). If you read this text, you will get no information \( E = mc^2 \). Really? Is there no information? Is there a difference between this text and some nonsense like “Huardest gefburn”? Kjift – not at all! A blind text like this gives you information about the selected font, how the letters are written and an impression of the look. \( \sqrt{a} \cdot \sqrt{b} = \sqrt{ab} \). This text should contain all letters of the alphabet and it should be written in of the original language. \( \frac{\sqrt{a}}{\sqrt{b}} = \sqrt{\frac{a}{b}} \). There is no need for special contents, but the length of words should match the language. \( a \sqrt{b} = \sqrt{ab} \).

Winery [1] is graphical modeling tool.

Simple Figure

Figure 1. Simple Figure

Table 1. Simple Table

Simple Table

cref Demonstration: Cref at beginning of sentence, cref in all other cases. Figure 1 shows a simple fact, although Fig. 1 could also show something else. Table 1 shows a simple fact, although Table 1 could also show something else. Section 1 shows a simple fact, although Sect. 1 could also show something else. Brackets work as designed: <test>

The symbol for powerset is now correct: \( \mathcal{P} \) and not a Weierstrass p (\( \wp \)).

1. All these items...
2. ...appear in one line 3. This is enabled by the paralist package.

“something in quotes” using plain tex or use “the enquote command”.
2 Conclusion and Outlook

Acknowledgments ...

In the bibliography, use \textsuperscript{} for “st”, “nd”, ...: E.g., “The 2\textsuperscript{nd} conference on examples”.
