NAME

catppt − reads MS-PowerPoint file and puts its content on standard output

SYNOPSIS

catppt [**-lV**] [**-b** *string*] [**-s** *charset*] [**-d** *charset*] *files*

DESCRIPTION

catppt reads MS-PowerPoint presentations and dumps its content to stdout.

OPTIONS

-l list known charsets and exit successfully

-b*string* slides break string. This string (by default - formfeed) would be output at the end of each slide page.

-d*charset*‘

- specifies destination charset name. Charset file has format described in CHARACTER SETS section of **catdoc**(1) manual page. By default, current locale charset would be used if langinfo support was enabled at the compile time.

-s*charset*

- specifies source charset. Typically, PowerPoint files use UNICODE strings with known charsets, but for some reason you may wish to override it.

-V outputs version number

SEE ALSO

cat(1), **catdoc**(1), **xls2csv**(1), **strings**(1), **utf**(4), **unicode**(4)
